Subject: Comments to the Chairman

George A. Adams III (wahoo4438@yahoo.com) writes:

I am a deaf resident of Myrtle Beach, SC. How can the FCC protect the Deaf or HOH or Deaf/blind to have an emergency outgoing call on highway. I had contacted the SC Dept. of Transportation about the *HP to call in for emergency if your car is broke down and a blue and white truck will stop by your car to help with your car problems. Deaf cannot use 711 to dial 911 to contact SCDOT *HP.

I think the FCC should allow 711 to work along with 911 to make an emergency call. Maybe you have a better system. Only solution to this problem is to have more towers so the Deaf or HOH can use sidekick 2 or 3, Hip Top 2 and blackberry. I was told that Blackberry is not interested at all in the welfare of the Deaf.

Why cannot FCC make the local state government to provide free device of sidekick 2 or 3, Hip Top 2, and Blackberry. If they upgrade these devices, that is grand keep us with new technology. One of biggest problem is Weather Alert on Hip Top 2 or Sidekick 2 or 3 or Blackberry to warn the deaf ahead about the disastrous weather.

I urge FCC to make those manufacturers to have Alert Weather in local area. I think all Deaf or HOH thru out U.S. should get free sidekick 2 or Hip Top 2 or Blackberry so the Deaf can protect themselves what is going on ahead. Suppose I was getting out because of the disastrous weather but cars in long lines and other hearing in their car hear the radio about the disastrous weather, how can the deaf protect themselves to know what is happened ahead of them. They have no idea what is occurred ahead.
